

Exhibit - July 23, 2025 NURP AFT Webinar

Source frame from NURP's AFT 5x Capital Amplifier presentation. The image below is reproduced from the preserved screen recording without annotations.

The screenshot shows a webinar interface. On the left, a presentation slide titled "Algorithmic Funded Trader (AFT)" is displayed. The slide lists the following bullet points:

- AFT is a program that allows algorithmic traders to trade with 5x more capital (provided by broker as an equity credit)
- We worked with a broker to customize this offering. Minimum deposit of \$10k USD (\$50k account), maximum deposit of \$200k USD (\$1m account) per account
- Maximum drawdown is capped at 20% of initial account size (profits can be accumulated to provide more room)
- Clients can run up to 5 accounts, and keep 100% of profits generated.
- Please contact your sales rep or relationship manager if interested

Below the slide, the name "Jeff Sekinger" is visible. On the right side of the screen, there are two video feeds. The top feed shows a man with glasses and a beard, wearing a dark shirt, in a home office setting. The bottom feed shows a man with dark hair and a mustache, wearing a light-colored shirt, also in a home office setting.

Visible on the slide: the AFT program's 5x broker equity-credit structure, \$10,000 minimum deposit / \$50,000 account example, \$200,000 maximum deposit / \$1 million account example, and the stated maximum-drawdown cap.

Source Identification and Relevant Representation

Event: NURP AFT 5x Capital Amplifier Demo

Date: July 23, 2025

Source: Preserved screen recording of the webinar

Relevant segment: Approximately 7:00 into the preserved clip beginning at approximately 5:25:24 PM.

The displayed slide is titled “**Algorithmic Funded Trader (AFT)**”. It states that AFT allows algorithmic traders to trade with 5x more capital, provided by the broker as an equity credit. The slide also gives the examples of a \$10,000 deposit producing a \$50,000 account and a \$200,000 deposit producing a \$1 million account.

The slide states:

“Maximum drawdown is capped at 20% of initial account size (profits can be accumulated to provide more room)”

This exhibit is intended to preserve and identify the representation visible in the source recording. No conclusion is stated here regarding how the representation applied to any later Talos account or whether later written terms modified it.

The complete original recording has been preserved and can be supplied if requested.
